

Revanth Sai Dontamsetty

Power Platform & AI Developer | Copilot Studio & Agentic AI | Azure OpenAI & AI Foundry | RAG & MCP Integration | Enterprise Consulting

Dubai, UAE • revanth.dontamsetty1999@gmail.com • +971 502966865 • [linkedin.com/in/revanthdontamsetty](https://www.linkedin.com/in/revanthdontamsetty)

PROFILE SUMMARY

Microsoft Power Platform & AI Developer with **4.8 years** of enterprise delivery experience across UAE Government and Fortune-500 clients including **Abu Dhabi Airports** and **Al-Futtaim Group** (Lexus, BYD, Toyota). Specialist in **Copilot Studio** agent design, **Azure AI Foundry** custom model deployment, **RAG pipelines** on Azure AI Search, **MCP** (Model Context Protocol) integration, and full-stack Power Platform development. Delivered AI-powered automation with measurable business outcomes across aviation, automotive, and real estate sectors. Targeting Senior Copilot Studio Consultant and AI Engineer roles in the UAE/GCC market.

TECHNICAL SKILLS

Generative AI & LLMs Azure OpenAI Service (GPT-4o, GPT-4o mini), Azure AI Foundry, Custom Model Deployment, Prompt Engineering, RAG, RAFT, Tool Use / Function Calling, Multi-agent Orchestration

Copilot Studio & Agents Agent Design, Custom Topics, Triggers, Entities, Knowledge Sources, Actions, MCP Tool Servers, AI Builder, Voice-to-Action Automation, Generative Answers

Knowledge & Search Azure AI Search, Vector Embeddings, Hybrid Semantic Search, Indexing Pipeline (Blob Storage → Skillsset → Indexer → Vector Index), Azure Blob Storage, SharePoint Indexing

MCP & Integration MCP (Model Context Protocol), Dataverse MCP, JIRA MCP, Custom Connectors, REST APIs, HTTP Connectors, JSON, OData, Azure Logic Apps

Power Platform	Power Apps (Canvas & Model-Driven), Power Automate (Cloud & Scheduled), Power Pages, Power BI, Dataverse, ALM & Environment Management
-----------------------	--

Microsoft Ecosystem M365, SharePoint Online, Teams, Outlook, OneDrive, Dynamics 365, Azure DevOps

Security & Governance RBAC, Row-Level Security (RLS), Dataverse Security Models, Power Platform ALM Pipelines, AI Governance

Dev Tools HTML5, CSS3, JavaScript, React JS, Tailwind CSS, SQL Server, Jira, Agile/Scrum

PROFESSIONAL EXPERIENCE

Power Platform & AI Developer

Tech Carrot · Dubai, UAE

May 2025 – Present

Client: Abu Dhabi Airports — UAE Government Aviation Authority

- Architected **Resource Downgrade** — a complex full-lifecycle Canvas Power App deployed across all terminals at Abu Dhabi Airports — enabling **5+ operational teams** to log, track, and escalate downgraded airport resources (conveyor belts, gates, check-in counters, security lanes) in real time, achieving **100% SLA compliance**
- Built a **Copilot Studio conversational agent** deployed via **Microsoft Teams** as a natural language interface for the same resource downgrade workflow — enabling staff to raise requests by describing incidents (e.g. *“Conveyor belt is down at Terminal 1, Line 6”*), with **Power Automate flows as tools** executing request creation and routing automatically
- Engineered **SLA-driven escalation, notification, and reminder workflows** via Power Automate Cloud Flows — eliminating missed deadlines and manual follow-ups across all airport operational teams at scale
- Implemented enterprise **RBAC in Dataverse** with granular role-based access for requesters, approvers, and administrators — ensuring zero unauthorized data access across a multi-team UAE government environment
- Optimized app performance for high-volume airport operations data through **delegation techniques**, server-side filtering, and strategic indexing — eliminating non-delegable query bottlenecks across large-scale datasets
- Conducted stakeholder workshops to gather requirements and produced **solution architecture documents** and data model specifications covering the full resource lifecycle; deployed across Dev, UAT, and Production via **Power Platform ALM Pipelines** with knowledge transfer sessions for sustainable client adoption

Client: Al-Futtaim Group — Real Estate & Automotive Division (Lexus, BYD, Toyota)

- Built a **centralized Power Apps platform** for Al-Futtaim's automotive division — enabling seamless brand-based login so showroom staff across Lexus, BYD, and Toyota can create leads, book test drives, and manage appointments from a single unified interface, eliminating siloed brand operations across 3 business units
- Architected **AutoServe AI** — a production Copilot Studio vehicle service and warranty agent backed by **Azure Logic Apps** as tool orchestration and a full **Azure AI Search RAG pipeline** (Blob Storage → Skillset → Indexer → Vector Index) as the knowledge layer — enabling customers to raise service requests, verify warranty coverage, and book appointments via natural language

- Deployed an **Azure AI Foundry** internal agent with a custom **GPT-4o mini** model endpoint for Sales Executives and Guest Relations Officers (GRO) — enabling real-time natural language querying of daily test drive schedules and customer details; leveraged lightweight **custom model deployment** to minimize token consumption and reduce inference costs across high-frequency internal operational queries
- Built **voice-to-action AI automation** using AI Builder + Power Automate for the Real Estate division — enabling agents to create property viewings, leads, and appointments via natural language speech, reducing manual data entry by **40%** across 100+ daily transactions
- Engineered **prompt-driven conditional Power Automate flows** processing user intent and brand context — routing through brand-specific branches (Lexus / BYD / Toyota) with accurate record creation per showroom; designed **multi-turn conversational flows**, entity extraction, fallback handling, and escalation-to-human logic ensuring robust agent behaviour across edge cases
- Implemented **agent-level RBAC** and dynamic showroom-based access control via external API integration — resolving user brand context at runtime and ensuring strict data segregation across a multi-brand enterprise environment
- Automated **Outlook notifications, calendar blocking, and follow-up reminders** via Power Automate — improving customer engagement and response rates across the full automotive sales pipeline

Application Developer

Accenture · Hyderabad, India

April 2022 – May 2025

- Delivered **8+ enterprise Power Platform solutions** across Canvas Apps, Model-Driven Apps, and Power Pages — covering full lifecycle from requirements workshops and solution design through UAT and production deployment across multiple enterprise clients
- Architected **Model-Driven Apps** with complex Dataverse data models, business rules, and automated process flows — delivering structured workflow management with full audit trail and role-based data visibility; built **Power Pages portals** with secure external authentication and enterprise RBAC across multiple client environments
- Developed **custom connectors** integrating Power Platform with SharePoint, Teams, Outlook, and third-party REST APIs — enabling seamless M365 ecosystem connectivity supporting enterprise Copilot and automation initiatives
- Implemented **Row-Level Security (RLS)** in Power BI across enterprise reporting; engineered complex Power Automate workflows including HTTP connectors, scheduled flows, and multi-stage approval processes — reducing manual processing time across multiple clients
- Led **stakeholder requirements workshops**, produced technical design documents, and managed sign-off across Agile/Scrum delivery teams — ensuring on-time delivery and client satisfaction across 3+ enterprise engagements

Power Apps Developer

Asian Paints · Hyderabad, India

July 2021 – Nov 2021

- Developed Canvas Apps and Power Automate workflows for order management and approvals — increasing process efficiency by **50%** and eliminating manual intervention across the order pipeline
- Conducted performance tuning through formula optimization, delegation resolution, and concurrent functions — achieving **25%** improvement in app responsiveness; built reusable flow templates reducing recurring development time

CERTIFICATIONS

- Microsoft Certified: Power Platform Fundamentals — PL-900
- Microsoft Applied Skills: Create and Manage Automated Processes using Power Automate
- Microsoft Applied Skills: Create and Manage Canvas Apps with Power Apps

EDUCATION

Bachelor of Science — Andhra University, India

GPA: 8.6 / 10

July 2017 – Oct 2020
